DETAILED ACTION

1. Information Disclosure Statement filed on 6/24/2003 has been received.

Specification

2. The disclosure is objected to because of the following informalities: The specification does not disclose that the moment arm of the second segment is longer than the moment arm of the first segment as claimed in claims 5 and 14.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 4 and 13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is unclear to the examiner how an element that is part of the second segment can extend transversely from the second segment.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3683

6. Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Taunay (U. S. Patent no. 4,679,841).

Taunay discloses:

Arm 9 with first segment between pivot point 8 and pivot point 19 and second segment between pivot point 13 and pivot point 19, gas spring 5 with two segments, hinge assembly 3, roller 17

Taunay does not disclose biasing the roller against the vehicle closure member. Taunay discloses biasing the roller against the vehicle. It would have been obvious to one of ordinary skill in the art at the time the invention was made to bias the roller against the vehicle closure apparatus instead of the vehicle itself as such is merely a design choice. Both devices have the exact same function.

Regarding claims 5 and 14, the moment arm 13-19 is longer than the moment arm 8-19 as can be seen in figure 2. Additionally, applicant admits that the length of the moment arm is merely a design choice based on environmental factors and is therefore obvious to have any length of the moment arms (Paragraph 18 "Therefore, location of the pivot 22 relative to the hinge axis 44 is dependent on application specific parameters, such as member weight and size.").
